

Comprehensive care coordination for health and human services and post-acute

CareManager

CareManager™ is an EHR-agnostic population health management platform that provides care coordination, interoperability, analytics, outcomes and risk stratification. Utilizing the platform assists with lowering risk of readmission without compromising quality. This platform is person-centered and cost-effective. CareManager aggregates data to identify trends and presents health and treatment outcomes for analytics-driven decision making.

Key features

- Provides real-time emergency department, hospital and gaps in care alerts
- Displays dashboard view of high-risk individuals
- Aggregates and display meaningful data in one system
- Access to performance measures and data in real-time, saving time and improving outcomes
- Presents the whole picture of an individual with metrics that matter
- Integrates with myStrength, a consumer-driven, evidence-based tool, helping organizations meet service demands and empowering individuals to better manage their conditions

Key benefits

- Easily assign and manage caseloads
- Integration with multiple disparate systems to eliminate double entry of clinical data
- Real-time, flexible reporting accessible to all users
- Access to a person's complete health history
- Actionable analytics for proactive care

CareManager is an EHR-agnostic solution that coordinates care across all settings
