

Leverage the network for integrated care

CareConnect

CareConnect™ is an integration engine that advances interoperability and allows organizations to connect with other providers outside their four walls. Through a single connection point, organizations can exchange information securely with literally thousands of other providers.

CareConnect supports all federal and state policies and standards for health information exchange, including privacy and security standards (such as HIPAA and state laws), technology interoperability standards (such as Direct) and message types (such as HL7 and CCDA).

Summary of key features

- Incorporates discrete data, including lab results and HIE information, from external sources into the workflow and treatment plans for individuals
- Supports both consent to send and consent to query scenarios for health information exchanges (HIEs)
- Supports secure Direct Messaging internally among care team members, as well as externally with large healthcare systems, public health agencies, health information exchanges and laboratories
- Hosted solution that eliminates the need for interface maintenance
- Ability to participate in the Netsmart referral network

Key benefits

- Provides one point of access to connect to the larger healthcare ecosystem
- Eliminates the exchange of paper clinical documentation and supports true connected care through the sharing of information electronically
- Reduces costs and improves safety by minimizing redundant or unnecessary treatment during transitions of care
- Supports care coordination by making the right information available at the right time, to the right providers

CareConnect gives Netsmart clients the ability to participate in Carequality, which is a nationwide care coordination initiative that brings together healthcare IT vendors and providers to promote interoperability.
